To Optimize the Open Days

# Opti Days-60

## To Optimize the Open Days

Opti Days - 60 is a nutritional supplement for cattle from the period between the date of calving and date of successful conception (Open days). It's a combination of energy precursor and metabolism modifier along with high bio-available Calcium and Phosphorus with chelated micro minerals and vitamins fortified with rumen conditioners and electrolytes in a granular form. The first 60 days after calving is extremely important in determining future health, milk production and reproductive success of the dairy cow.

### Features and Benefits

- Helps to maintain optimum service period of 60 – 90 days.
- Helps in timely involution of the uterus and prepares it for the next calving.
- Reduces the number of services per conception and helps to have one calf yearly in cattle.
- Maintains Calcium balance reduces hypocalcaemia after parturition.
- Increases availability of energy and reduces the incidence of Ketosis.
- Help to maintain peak yield for longer period.

### Recommendation

**Large animals :** 50 to 100 gm daily from the date of calving. (Give the first dose immediately after calving).

**Presentation:** 5 kg bucket.
